Scenario

Empathy map for customized timetable

Think and Feel?

I need better way to stay organized with my classes, meetings and tasks.

Anxious about disorganized schedules and managing time.

Relief when everything is planned, but still uncertain about flexibiity.

See?

Overloaded with reminders and notifications from different apps.

Paper schedules or notebooks that are difficult to upadte.

Friends using different apps or methods to organize their time.

Hear?

This app is too generic. I wish it catered to my specific schedule needs.

Why do i keep forgetting things? I need a better way to crack my day.

From peers or mentors: "you should try using a prope time management tool".

Do and Say?

I need an app that customizes my schedule based on my personal needs.

I want an easy-to-use solution where i dont have to manually input every little detail.

Juggling multiple apps (calenders, to-do llists, reminders).
